

Font Specification

Typeface identification, reasoning and outlining status

All print files contain text converted to outlines. Recipients do NOT need any font installed. This document is for reference only.

Element	Text	Closest typeface identified	Confidence	How it is reproduced in the files
M/Y monogram	M + Y (intertwined)	Custom-drawn high-contrast serif letterforms (a long M diagonal flowing into the Y; a crescent stroke). Stylistically near high-contrast display serifs, but no stock font matches the construction	n/a — custom	Traced from the reference outlines, cleaned, and interlace gaps rebuilt as continuous vector cuts. No font used
Curved text (logo, tambourine)	YOUSSEF & MAII • 08-10-2026	Classical Garamond-style roman capitals with wide tracking. Closest open font by visual comparison: Cormorant Garamond SemiBold (ampersand form, splayed M, lining figures)	Moderate	Traced glyph outlines from the reference (already spelled MAII), so the lettering matches the reference exactly. No font used
Invitation names	Youssef & Maii	Crimson Text Italic (Regular 400) — SIL Open Font License	High (best of 11 candidates; NCC 0.72)	Typeset and outlined. Size and tracking fitted to the reference line (em size 10.37 mm 29.4 pt, tracking +0.04 em). The reference spells it “Mai”; the files use the correct “Maii”, so this line could not be traced
Invitation date	8th of October, 2026	Crimson Text Italic (Regular 400)	High (NCC 0.92)	Typeset and outlined, fitted to the reference (em size 5.66 mm 16.0 pt, tracking +0.0275 em)

Identification method

- The two invitation lines were extracted from the reference as ink maps. Eleven italic serif candidates (Crimson Text 400/600, Crimson Pro 400/500, Cormorant Garamond 600/700, EB Garamond 500/600, Cardo, Sorts Mill Goudy, Libre Caslon, Spectral, Gelasio) were rendered at matched height and scored by normalised cross-correlation.
- Crimson Text Italic scored highest on both lines and matches the Et-style ampersand, the hooked f, the Y form and the lining figures.
- Observed difference: the reference renders slightly heavier than Crimson Text Regular Italic (Crimson Text SemiBold Italic is too heavy). The reference is an AI-rendered image, so the true original font cannot be determined. If the original designer’s font is known, send it and the two lines can be re-set in minutes without touching anything else.

Sample (outlined in the print files)

Youssef & Maii
8th of October, 2026

Font files for reference

06_PRINT_SPECIFICATIONS/Fonts_Reference/ contains CrimsonText-Italic.ttf and its SIL Open Font License (OFL.txt), so a designer can edit the invitation lines. These files are not needed for printing.
