

Preflight & QC Report

Automated preflight, checklist, measurements and every flagged deviation

A. Automated preflight (all print files)

File	Spots	Raster	Fonts	RGB/Gray	Result
01_MASTER_VECTOR/Youssef_Maii_Master.pdf	FOIL_GOLD	0	0	0	PASS
02_CUPS/Cup_CMYK.pdf	CMYK only	0	0	0	PASS
02_CUPS/Cup_FOIL_GOLD.pdf	FOIL_GOLD	0	0	0	PASS
03_TAMBOURINE/ALTERNATIVE_uniformly_scaled_to_safe_area/Tambourine_ALT_93.3_percent_CMYK.pdf	All, DIELINE_TBC	0	0	0	PASS
03_TAMBOURINE/ALTERNATIVE_uniformly_scaled_to_safe_area/Tambourine_ALT_93.3_percent_FOIL_GOLD.pdf	All, DIELINE_TBC, FOIL_GOLD	0	0	0	PASS
03_TAMBOURINE/Tambourine_CMYK.pdf	All, DIELINE_TBC	0	0	0	PASS
03_TAMBOURINE/Tambourine_FOIL_GOLD.pdf	All, DIELINE_TBC, FOIL_GOLD	0	0	0	PASS
04_INVITATION/Invitation_CMYK.pdf	All	0	0	0	PASS
04_INVITATION/Invitation_FOIL_GOLD.pdf	All, FOIL_GOLD	0	0	0	PASS
05_LOGO/Logo_Crest_Botanical.pdf	CMYK only	0	0	0	PASS
05_LOGO/Logo_Crest_Botanical_FOIL_GOLD.pdf	FOIL_GOLD	0	0	0	PASS
05_LOGO/Logo_Full.pdf	CMYK only	0	0	0	PASS
05_LOGO/Logo_Full_FOIL_GOLD.pdf	FOIL_GOLD	0	0	0	PASS
05_LOGO/Logo_Monogram.pdf	CMYK only	0	0	0	PASS
05_LOGO/Logo_Monogram_FOIL_GOLD.pdf	FOIL_GOLD	0	0	0	PASS

File	Text elements	Images	Filters/gradients/masks	Result
01_MASTER_VECTOR/Youssef_Maii_Master.svg	0	0	0	PASS
02_CUPS/Cup_Crest_Artwork.svg	0	0	0	PASS
02_CUPS/Cup_Master.svg	0	0	0	PASS
03_TAMBOURINE/ALTERNATIVE_uniformly_scaled_to_safe_area/Tambourine_ALT_93.3_percent_Master.svg	0	0	0	PASS
03_TAMBOURINE/Tambourine_Master.svg	0	0	0	PASS
04_INVITATION/Invitation_Master.svg	0	0	0	PASS
05_LOGO/Logo_Crest_Botanical.svg	0	0	0	PASS
05_LOGO/Logo_Full.svg	0	0	0	PASS
05_LOGO/Logo_Monogram.svg	0	0	0	PASS
01_MASTER_VECTOR/Youssef_Maii_Master.eps	—	0	FOIL_GOLD separation: yes	PASS

B. Checklist

Check	Result	Notes
LOGO — Is the M/Y identical to the reference?	PASS	Traced from the 1254 px flat logo and verified by overlay (IoU 0.963 for the whole logo; see QC_Logo_Overlay_vs_Reference.png). The same monogram registers on the tambourine reference at NCC 0.99
LOGO — Botanical elements unchanged?	PASS	Traced, not redrawn. No flowers added or removed. One ~2 px stray mark at the arc/branch junction was treated as an image artefact and removed (see D)
LOGO — Proportions preserved?	PASS	Only uniform scale/rotation/translation used for placement. No distortion
LOGO — Anything creatively redesigned?	PASS	No. Corrections are listed in D; all are reversible and flagged
TEXT — Youssef & Maii	PASS	Invitation: glyph sequence verified M-a-i-i (HarfBuzz shaping output). The reference image reads “Mai”; corrected
TEXT — 8th of October, 2026	PASS	Invitation date line; OCR/visual check

Check	Result	Notes
TEXT — YOUSSEF & MAII • 08-10-2026	PASS	Logo and tambourine curved text; unwrapped to a straight line and read visually: two I's
COLOUR — CMYK artwork is CMYK	PASS	No RGB/Gray operators in any print PDF
COLOUR — Foil separated on its own spot layer	PASS	FOIL_GOLD Separation, own layer, tint 1.0 only, overprint. Page 2 = foil only
COLOUR — No accidental RGB in print artwork	PASS	Verified by preflight. PNG previews/mockups are RGB by nature and are not print files
COLOUR — No rasterised foil	PASS	0 raster images in all PDFs/EPS
VECTOR — Logo / botanical vector	PASS	Bezier paths (potrace-fitted after 5–8× super-sampling, cleaned; arc = true geometric circle; interlace gaps = fitted curves)
VECTOR — Typography outlined	PASS	0 fonts in PDFs; 0 <text> elements in SVGs
VECTOR — No low-resolution raster elements	PASS	None
PRODUCTION — Bleed documented	PASS	Per-product specs
PRODUCTION — Safe area documented	PASS	Per-product specs and SVG guide layers
PRODUCTION — Supplier-dependent dimensions identified	PASS	All physical sizes are labelled ASSUMED/ESTIMATE — TBC
PRODUCTION — Unknowns not presented as facts	PASS	Recommended values carry the “RECOMMENDED GENERAL PREPRESS SPECIFICATION — FINAL VALUES TO BE CONFIRMED WITH SUPPLIER” label

C. Fine-detail measurements (vector artwork at the master sizes)

Item / size	Typical hairline	Interlace gap	Smallest counter
Full logo @ 100 mm wide	0.50 mm	0.20 mm	—
Invitation crest (40 mm wide)	0.18 mm	0.10 mm	0.14 mm
Invitation vines	0.42 mm	—	0.39 mm
Cup crest @ 48 mm high	0.25 mm	0.13 mm	0.18 mm
Tambourine @ Ø150 mm	0.66 mm	0.29 mm	0.49 mm

Compare against the general foil minimums (0.25 mm lines, 0.30 mm gaps/counters — TBC with the supplier). Values below them are faithful to the reference and are flagged for a supplier test, not altered.

D. Reference inconsistencies, corrections and open flags

#	Observation	Action taken	Status
1	The invitation reference reads “Youssef & Mai” (one i)	Line typeset with the correct “Youssef & Maii”; nothing traced from that line	CONFIRMED
2	Cup/invitation crest sprigs are the same drawing as the logo botanical (right +12°, left rotated –173°); the AI-rendered references show small variations	One master botanical used in both positions at the measured angles/scales. No new drawing invented	INFO
3	The cup photo shows the sprigs slightly wider apart relative to the monogram (perspective prevents exact measurement)	Flat invitation crest used as the single master; spacing NOT changed	FLAG
4	The invitation monogram is rendered tilted +0.68°	Set upright, identical to the flat logo	INFO
5	The invitation background has a very faint tone-on-tone foliage texture	Not reconstructed (too faint to reproduce without guessing)	FLAG
6	The butterfly is a physical 3-D element	Not printed; placement zone marked (non-printing)	INFO
7	A ~2 px faint stray mark near the arc/branch junction of the logo	Removed as an artefact. Can be reinstated on request	FLAG
8	The tambourine gold ring is the metal hoop	Not printed; optional printed ring on request	TBC
9	Tambourine botanical reaches the face edge; invitation vines 0.6 / 1.3 mm from trim	Kept as the reference; flagged. Optional 93.3 % tambourine variant supplied	FLAG
10	Invitation lettering renders slightly heavier than Crimson Text Regular Italic	Closest open font used; re-set if the original font is supplied	FLAG

#	Observation	Action taken	Status
11	Crest fine detail below general foil minimums at invitation/cup sizes	Kept; supplier test strike recommended	FLAG

E. Reconstruction method (for transparency)

- Each reference was converted to an “ink map” (Lab chroma + luminance relative to the local paper colour), so the metallic highlights and paper texture of the render do not leak into the shape.
- Maps were super-sampled 5–8× before edge fitting, so curves come from sub-pixel edge positions rather than jagged pixels. Bezier fitting used potrace with smoothing tuned per element (sharper for serifs, smoother for organic linework).
- The thin circular arc was replaced by a true geometric arc (fitted radius 409.9 px at reference scale, residual ± 0.7 px over 164° – 268°), joined to the traced branch where the arc bends into the stem.
- Monogram interlace gaps: detected as thin paper-coloured channels, fitted with smooth cubic curves, and cut as continuous 1.8 px (reference-scale) channels, fixing the broken gaps a plain trace produces.
- Every product layout was measured from its own reference by template matching + correlation refinement of the master components (similarity transforms only).
- Honest limit: the references are 1000–1500 px renders, so some sub-pixel irregularities of the hand-drawn botanical lines are inherent to the source. For very large formats ($> \sim 1$ m), a designer’s manual Bezier clean-up pass on the botanical linework is recommended. The shapes and composition must not change.
