

Production Specification

Package overview, PDF construction and general prepress guidance

RECOMMENDED GENERAL PREPRESS SPECIFICATION — FINAL VALUES TO BE CONFIRMED WITH SUPPLIER

FINAL DIELINE, PRINTABLE AREA, SCALE, BLEED AND SAFE AREA MUST BE CONFIRMED AGAINST THE MANUFACTURER'S TEMPLATE BEFORE PRODUCTION.

1. Scope

A vector print-production reconstruction of the existing Youssef & Maii engagement identity from the four supplied reference images. The identity has **not** been redesigned. Each item was reproduced as closely as the references allow, and every deviation or uncertainty is listed in the Preflight & QC Report.

2. Package structure

Folder	Contents
01_MASTER_VECTOR	Youssef_Maii_Master.svg / .pdf / .eps: component library of every artwork element on one sheet. FOIL_GOLD spot in PDF/EPS; labels on a non-printing layer
02_CUPS	Cup_CMYK.pdf, Cup_FOIL_GOLD.pdf (crest at recommended 48 mm height), Cup_Crest_Artwork.svg, Cup_Master.svg (illustrative development + placement), Cup_Preview.png, Cup_Print_Spec.pdf
03_TAMBOURINE	Tambourine_CMYK.pdf, Tambourine_FOIL_GOLD.pdf, Tambourine_Master.svg, Tambourine_Preview.png, Tambourine_Print_Spec.pdf, ALTERNATIVE_uniformly_scaled_to_safe_area/
04_INVITATION	Invitation_CMYK.pdf, Invitation_FOIL_GOLD.pdf, Invitation_Master.svg, Invitation_Preview.png, Invitation_Print_Spec.pdf
05_LOGO	Logo_Full / Logo_Monogram / Logo_Crest_Botanical in .svg, .pdf (CMYK gold simulation), _FOIL_GOLD.pdf, _transparent.png, Logo_Preview.png
06_PRINT_SPECIFICATIONS	This document; Color_, Font_Specification; Supplier_Checklist; Preflight_QC_Report; QC overlay image; Fonts_Reference/
07_PREVIEWS	Cup_Mockup.png, Tambourine_Mockup.png, Invitation_Mockup.png. MOCKUPS ONLY, not print files
08_SOURCE_BUILD	Component vector path data and the scripts that assemble every file, for re-generation at new sizes once dielines arrive

3. File types and what to send to whom

File	Purpose
*_FOIL_GOLD.pdf	Production file for foil. Page 1 = combined (CMYK layer + FOIL_GOLD layer). Page 2 = foil elements only (die making). The FOIL_GOLD objects are 100 % spot, overprint
*_CMYK.pdf	4-colour fallback: the gold is a CMYK GOLD SIMULATION (C32 M52 Y83 K13). Not foil. Do not send both to the same press run without instructions
*_Master.svg	Editable master (Illustrator/Inkscape). Layers: GUIDES (non-printing, locked), CMYK PRINT - BACKGROUND, FOIL_GOLD. Units mm
*.eps	Master library as EPS for suppliers that require EPS. The FOIL_GOLD separation is preserved
*_Preview.png / 07 mockups	Visual reference only

4. PDF construction

- CMYK colour mode; no RGB or Gray operators anywhere (verified by preflight).
- 100 % vector: no raster images, no live fonts (all text outlined), no transparency, gradients, shadows, clipping masks or effects.
- Colour spaces: DeviceCMYK plus Separation spots FOIL_GOLD (foil), DIELINE_TBC (assumed reference outline, non-printing) and All (registration, crop marks only). Only colours actually used are declared.
- Named layers (PDF Optional Content): e.g. “CMYK PRINT - BACKGROUND”, “FOIL_GOLD - SPOT COLOR (metallic foil, 100% solid)”, “CMYK GOLD SIMULATION (4-colour print, not foil)”, “REFERENCE OUTLINE - ASSUMED SIZE, TBC WITH SUPPLIER (non-printing)”, “CROP MARKS”.
- Page boxes: MediaBox (with 12 mm slug for marks), BleedBox and TrimBox set on every press file; crop marks 0.25 pt in Registration, offset outside the bleed.

- The files are built to PDF/X principles but are **not certified PDF/X**. The printer should run their own preflight or convert to their required standard (e.g. PDF/X-4) with their output intent.

5. Recommended general prepress values

RECOMMENDED GENERAL PREPRESS SPECIFICATION — FINAL VALUES TO BE CONFIRMED WITH SUPPLIER

Parameter	Value	Status
Bleed (flat items)	3 mm	RECOMMENDED — TBC
Safe area (flat items)	5 mm inside trim	RECOMMENDED — TBC
Trim	As per each product spec (all ASSUMED)	ASSUMED — TBC
Minimum positive foil line	0.25 mm (0.7 pt)	RECOMMENDED — TBC
Minimum reversed gap / counter inside foil	0.30 mm	RECOMMENDED — TBC
Minimum gap between separate foil elements	0.30–0.50 mm	RECOMMENDED — TBC
Minimum CMYK line (4-colour build)	0.30 mm; single-plate lines 0.10 mm	RECOMMENDED — TBC
Foil-to-print registration tolerance	±0.3–0.5 mm (no tight register designed in)	RECOMMENDED — TBC
Overprint	FOIL_GOLD = overprint ON. DIELINE_TBC = overprint ON and must be set non-printing. CMYK objects knock out normally	RECOMMENDED — TBC
Trapping	Not applied. Foil sits over a flat cream flood (no abutting inks). CMYK gold and cream share C/M/Y plates, so misregistration shows no paper-white gap. The printer may apply their standard trapping	RECOMMENDED — TBC
Registration foil print	No tight register designed in; foil elements are not butted to printed elements	INFO

6. Product summary

Product	Master size used	Bleed / safe	Foil elements	Main open items
Invitation	127 × 170.52 mm (assumed)	3 / 5 mm	Crest, names, date, vines	Trim size; vines near trim; crest fine detail; butterfly
Tambourine	Face Ø150 mm (assumed)	3 / 5 mm	Monogram, botanical, curved text	Diameter; process; edge clearance; printed ring?
Cups	Crest 48 × 56.1 mm	Supplier-defined	Crest	Dieline; printable area; warp; foil vs ink; placements
Logo	Scalable (100 / 50 / 80 mm masters)	—	All	—

7. Adapting to manufacturer dielines later

- Every product is built from the same component library (08_SOURCE_BUILD/components) using only uniform scaling, rotation and translation, so artwork never needs redrawing.
- For a new dieline: import the template, place the relevant master SVG/PDF, scale uniformly to the confirmed printable size, keep FOIL_GOLD as its own spot plate, and export with the supplier's bleed/safe values.
- Or change the size constants in 08_SOURCE_BUILD/build_all.py (e.g. TAMB_D, CUP_CRESCENT_H, invitation width) and re-run it to regenerate every file consistently.
